ESTABLISHMENT RISK ASSESSMENT TEMPLATE

Greyhound CODE OF PRACTICE

It's a three-step process involving:

1. Identify hazards and risks that have the potential to cause harm to you or your greyhounds
2. Analyse and evaluate the risk to determine what harm it could inflict and,
3. Determine appropriate ways to effectively manage the risk

For example:

Identify hazard	Identify the effect	What will I do differently
Staff coming into the kennel blocks while cleaning	Possible slip hazard for staff	Place a 'Cleaning in Progress' traffic cone during cleaning
Entry and exits from the facility are not clearly defined or marked	Staff unable to evacuate safely and quickly from the Establishment	Purchase and apply Exit signs at the end of the kennel block

Other examples of risks that may be common to you include:

- Animal enclosures, stalls and cages; cuts from metal edges, manual handling injury, risk of infection and disease if areas housing animals are not frequently cleaned and disinfected
- Hazardous substances (drugs used in treatment, anaesthetics, cleaning chemicals)
