

Using GRV's simplified Greyhound Record template

In response to participant feedback, GRV has developed a simplified manual Greyhound Record template for participants who choose not to use FastTrack to keep injury, illness and health management records for the greyhounds in their care.

The simplified template lists the same location, detail and treatment options available in FastTrack which, if also used, will ensure consistency where manual records and FastTrack are used for the same greyhound.

What do you need to know?

- Any injury or illness affecting a greyhound must be recorded, as well as the treatment(s) provided.
- Any general health related activity or treatment must be recorded, such as daily vitamin supplements, breeding related tests or surgery, as well as worm and flea treatments.
- All certificates issued by a vet (e.g. vaccination, annual health check or euthanasia) as well as surgery reports and treatment plans are part of the Greyhound Record.
- The Greyhound Record belongs to the greyhound and must accompany him/her when moving to a new establishment.
- You must keep a copy of the whole Greyhound Record, including certificates, reports or treatment plans, with your establishment records for at least 2 years after a greyhound has left your care.
- The updated Greyhound Record template is available from Clubs, GRV's Code Support Line or for download and printing from the Code of Practice webpage.

Helpful Hints

- Use as many lines as needed to record all details of the event.
- Treatments that are ongoing, such as supplements, or given over multiple days, only require an event recorded the first day the treatment is given.
- One injury or breeding event may require different treatments that all need to be recorded, such as a surgery (fracture repair or C-Section) and the pain relief, antibiotics and/or anti-inflammatories prescribed.
- When recording breeding events such as progesterone tests or x-rays where there is no "treatment", record the event using *Health for Type*, *Progesterone Test* or *Pregnancy X-Ray* for Details and *No Treatment Required* for Treatment Given, including test results under Event Details for easy future reference.
- Photos of Greyhound Records are acceptable establishment record "copies".

Example - Completing the Greyhound Record

Name: John Smith

Establishment Address: 100 Station Street, Traralgon

Race Name <i>Tomorrow's Star</i>		Kennel Name <i>Tommy</i>		Sex <i>Dog</i>			
Whelp Date <i>2/5/17</i>		Colour <i>Brindle</i>		Microchip <i>8235</i>		Ear brand <i>VHYTG</i>	
Distinguishing Features <i>White Star shaped fur on head</i>						Kennel ID <i>8235</i>	
Event Type (worm, illness, flea, vaccination, Injury, supplement, etc)	Date of Event	Event Details (Include all info on the injury, illness or health treatment. e.g. any observations or comments, or where event happened.)
